Responsible Recycling

# Company Ethos

**The ideal metal recycling and waste management solution. Together we can make a difference.**

Entrec's passion to zero waste and dedication to the environment is reflected through our striving nature to exceed our customer's environmental goals. "Do what you can with what you have"

Entrec's specialist equipment combined with our effective data management structure is the key to our ongoing success. In today's environment recycling is becoming more of a focus in people's lives. Many individuals and companies strive to recycle as much as possible.

Our experienced and specialist team here at Entrec are able to scrap metal proficiently, producing

the highest quality products whilst minimising carbon emissions.

Entrec is fully licensed by the Environment Agency Wales under Waste Management Licence EAWML 37267 and premises code NIA090 and have a waste carrier licence CB/QM 3288 LX issued by the Environment Agency. Producer of Hazardous Waste Premises Code is OAZ 787

**"Do what you can with what you have"**

# Why Recycle?

**Minimise landfill by maximising your recycling.**

**Entrec's mission is to provide sustainable recycling solutions and value for our customers.**

We focus on processing a wide range of metals from general ferrous metals, steel girders, machinery, reinforcement and other manufacturing waste to various non-ferrous metals including copper, brass, stainless steel and aluminium.

Entrec understands that everyone's circumstances are unique; therefore we do our very best to meet your recycling needs by providing an impeccable service. Once we acquire your waste we will process and prepare it for the manufacturing procedure.

Our team of experts ensures that what's best for the environment will also be best for your company. Entrec's aim is to reclaim and reuse as much material as possible through our innovative methods and specialist equipment.

**What's best for the environment will also be best for your company.**

# Metal Recycling

## Entrec will buy and recycle all types of scrap metal

We will transform your waste resourcefully and effectively at a highly competitive price.

Despite the recent heavy falls in scrap metal values, Entrec remains committed to offering competitive prices for scrap metal with a high quality, efficient service. Building close relationships with our customers is of paramount importance to Entrec.

Entrec will purchase any amount of scrap metal from a variety of sources such as demolition contractors, local businesses, manufacturers and the general public. Our non-ferrous metals are cleaned, arranged into categories and cut to size ready for recycling at a separate process.

Some examples of ferrous and non ferrous metal we recycle are:

### Ferrous

- Cars
- Farm Machinery
- Industrial scrap
- Light Iron
- Mixed Steel

### Non Ferrous

- Copper
- Aluminium
- Brass
- Lead
- Stainless Steel
- Car Batteries

# Other Services

**Create a positive impact on the environment with our range of recycling services .**

## **Vehicle de-pollution**

Entrec specialises in recycling end of life vehicles for highly competitive prices. We organise every aspect of vehicle de-pollution process, from managing the necessary paperwork to de-registering the vehicle.

## **Skip services**

Entrec's skip service provides an effective waste management solution for our customers. We can supply skips of all sizes to meet your specific requirements. Entrec's skips are kept in a tidy condition to ensure they are respectable at the customer's premises.

## **Factory clearance**

Entrec's industry specialists provide a professional and convenient factory clearance service to businesses across the UK. We can dismantle buildings or structures and will act effectively and promptly to clear materials off the premises as instructed.

## **Secure Destruction**

Entrec operates a completely secure destruction service which not only maintains customer confidentiality but ensures all materials are completely destroyed and unable to re-use.

## **Waste Cable**

At Entrec, waste cables are processed through a special granulation plant where copper cored cable is turned into clean copper granules to be used by consumers globally. This process effectively eliminates the need for landfill.

**To meet your  
specific requirements.**
